

EMU Outdoor 2026. The Italian Art of outdoor living.

The Outdoor collections 2026 express EMU's vision: an authentic way of experiencing outdoor spaces, where Made in Italy design, material culture, and design sensibility come together naturally. Terraces, gardens, poolside areas, and social spaces are transformed into welcoming, timeless settings, capable of engaging with a wide range of contexts—from residential to luxury hospitality, from urban environments to nautical horizons.

Lightweight lines, woven details, and fluid geometries define new compositional possibilities, where metal, rope, fabrics, and colour palettes are combined with freedom and elegance. Manufacturing tradition and technological innovation guide every project, giving shape to furnishings designed to accompany time and the elements while preserving their identity.

The use of 100% recyclable steel and aluminium, along with other sustainable materials, reflects a conscious approach that looks to the future without compromising on the beauty of design. This is how spaces dedicated to relaxation and sharing take shape, where Italian hospitality is expressed with discretion and authenticity. For EMU, Made in Italy is not only a defining value, but a concrete commitment embodied in every collection.

Saint Martin – Design Marco Acerbis A collection of steel sofas featuring a light, versatile, and contemporary design. The unique, modular steel base transforms through interchangeable backrest and armrest modules in different materials—from rope to steel—offering ample customization options. The fully steel version stands out for its lightness, clean lines, and comfortable proportions. The wicker-back variant, with natural tones and a twist pattern, lends itself beautifully to “garden” environments, offering multiple stylistic solutions. The system provides great compositional and chromatic flexibility, ideal for indoor/outdoor settings that combine comfort, elegance, and functionality.

Collier – Design LCM Marin Design Studio EMU expands the Collier collection with a new steel living proposal, complementing the existing dining and lounge solutions. An ideal option for sophisticated hospitality and residential environments, standing out for its classic elegance and harmonious forms. Refined details and geometric contrasts recall traditional inspirations, while the decorative brass element embellishes the armrests of lounge chairs and two- and three-seater sofas.

“CORDA COLLECTIONS” – A mix & match dialogue between metal and rope

Collections that reinterpret EMU's ability to harmonize metal with tactile materials, introducing a softer, more enveloping, and natural visual language into the outdoor world. Rope becomes an integral part of the design—seen in the **Antigua**, **Nef**, and **Carousel** collections—creating lines, tensions, and visual rhythms. Variable colour combinations and proportions give each creation rhythm and character, transforming a technical element into a true aesthetic signature.

Antigua – Design Federica Biasi Aluminium living collection inspired by the fluid lines and geometries of sea waves. With an authentic, spontaneous character, Antigua stands out for its enveloping and dynamic design, expressed through soft shapes, generous dimensions, and light weaves. The wide, welcoming seating conveys a sense of lightness and freedom. Designed for versatile outdoor environments—from poolside to urban terraces, private gardens to contract spaces—the collection adapts naturally to both informal and refined contexts, even indoors. The aluminium frame, strong yet lightweight, is wrapped in a reinterpretation of rope weaving that enhances its aesthetics without concealing its metal soul. Comfort is ensured by cushions designed to provide ergonomic and adjustable support. Available in a wide range of colour combinations, from neutral hues to more vibrant tones, Antigua represents a perfect synthesis of functionality, elegance, and expressive freedom.

Nef – Design Patrick Norguet Nef is EMU's aluminium armchair inspired by the graphic design of hot-air balloons, combining eclectic style and visual lightness with a solid structure. The collection expands with a new material language thanks to the introduction of highly resistant rope weaving. Available in six new colour combinations, the rope complements the structure, offering an even more comfortable, lightweight, and functional seat. Perfect for contemporary dining environments, it is well suited for informal and experiential settings where design, materials, and colours coexist in harmony.

Carousel – Design Sebastian Herkner Ancient weaving techniques are reinterpreted in a contemporary way to evoke symbols of memory and make this furniture collection a perfect protagonist in any environment. The distinctive, elegant three-dimensional armrest embraces the user with a unique gesture. Its aluminium frame is enriched with various fabrics and materials, offering countless combination possibilities. The collection includes an armchair, lounge chair, sofa, ottoman, and side tables.

Yard – Design Stefan Diez Available in dining and lounge versions, this sustainable, comfortable, and eclectic armchair is renewed with a new acrylic strap weave containing 50% recycled fibre, paired with a 100% recyclable aluminium frame. The

elastic straps, innovatively fixed to the lightweight structure, ensure strength and durability, while the new colour range expands aesthetic possibilities without compromising the elegance of the design.

HOSPITALITY & CONTRACT COLLECTIONS

Every contract collection reflects EMU's philosophy: durability, comfort, material quality, safety, and Italian aesthetics. A wide selection of dining chairs and tables, street contract seating, lounge areas for communal spaces, and shading systems designed to create functional, harmonious environments. Dining tables and seating are crafted to meet the needs of restaurants, bistros, hotels, and public spaces. Comfort, strength, longevity, and design coexist with a wide variety of shapes, sizes, and materials, enabling the furnishing of both large and intimate spaces, indoor and outdoor. From essential, versatile tables ideal for informal settings to sophisticated sets for luxury hospitality environments, every solution enhances the dining experience. Lounge areas encourage relaxation and socialization, integrating with dining zones and creating stylistic and functional continuity. Ergonomic seating, durable fabrics, and material mixes ensure comfort and longevity, while warm, natural colours make every setting welcoming and harmonious. In 2026, new pastel shades join EMU's extensive palette, warming spaces and enhancing products with soft, luminous tones inspired by the Northern European taste

Alisea – Design Alessandro Stabile A street contract seat that combines design and technical innovation. Alisea brings together two distinct materials and techniques: curved steel rod and expanded metal sheet, transformed into a lightweight and comfortable metallic “fabric.” The airy seat pattern and the regularity of the backrest recall the fluidity and movement of the wind, creating an extremely comfortable, stackable, and versatile seat, available with or without armrests. The Alisea collection is distinguished by its lightness, essentiality, and ability to integrate easily into urban contract environments thanks to its refined design and wide colour range.

Cafè Collection – Design Christophe Pillet A steel collection with a contemporary feel and classic references, composed of chairs, armchairs, stools, and lounge versions. A line designed to ensure solidity and long-lasting performance, providing maximum comfort and versatility in both indoor and outdoor settings, residential or contract. The clean, elegant lines and wide colour palette allow for harmonious combinations and easy pairing with a variety of EMU's dining tables.

Combo – EMU D&S Lab Essential and versatile tables, an evolution of the historic Cambi collection, integrating easily into outdoor environments such as bistros, cafés, and restaurants. Available in various sizes, these tables adapt effortlessly to any space. Specially designed technical feet improve stability, durability, and ease of use in high-traffic settings.

SHADE BY EMU

A project of shading solutions developed through specific and innovative technical expertise, designed to meet the highest quality and guarantee standards for both collective spaces and private homes. Every shading system is engineered to ensure maximum performance, durability, and functionality, while rigorous material protection processes ensure long-lasting outdoor resistance, resistant to wear and tear and adverse weather conditions. All this without ever compromising aesthetics and design. Customizable in size, materials, and colours, these shading systems are ideal for creating relaxing oases in every season, on land or at sea, in perfect harmony with any space, use, or style. Central- and side-pole umbrellas, maxi umbrellas, and pergolas are complemented by integrated accessories for an enhanced performance: shade screens for increased privacy, telescopic opening and closing, gutter channels for rainwater drainage, ground or wall fixings, ballast weights for extra stability, wind-resistant systems, and remotely adjustable lighting.

EMU's presence in the contract sector is expressed through internationally relevant projects, confirming its reliability, quality, and consistency in design. EMU furnishes bars and restaurants around the world, combining performance and aesthetic value on a large scale. In the hospitality sector, as well as in public spaces and gardens, EMU responds to the needs of collective environments: its furnishings bring together durability, comfort, and harmony with their surroundings.

In the nautical sector, projects such as the flagship vessels Costa Smeralda and Costa Fortuna demonstrate the brand's ability to combine robustness and resistance to extreme weather conditions with a distinctive and recognisable design. These references represent only a selection of the many applications of EMU collections, highlighting their versatility and their ability to respond with elegance and functionality to any context.
