FOCUS ON COLLIER SUNBED

MATERIAL: STEEL

INSPIRATION

A new expression of the collection designed by LCM Marin Design Studio, the Collier sunbed interprets relaxation through a refined, essential, and timeless gesture. The design is conceived in a balance between tradition and contemporaneity: harmonious proportions, attention to detail, and geometries that create a measured and distinctive visual rhythm. A project that enhances space, giving it character and identity. Versatile by nature, the Collier sunbed lends itself to different interpretations: it can stand alone as a personal retreat under the sun, or transform into an intimate and sophisticated daybed, designed for shared moments and authentic pauses. Solid in its steel structure yet light in its expression, and customizable in colors, it is designed for environments that seek authenticity and personality. From exclusive hospitality settings to high-end residential spaces, it expresses an Italian elegance capable of dialoguing with different contexts and cultures.

TECHNICAL FEATURES

- Sunbed (for single use or as a daybed, reclining, equipped with cushion and rear wheels for easy movement).
- Frame in square-section steel tubing 20x20 mm, thickness 2 mm; seat and backrest support in pre-galvanized expanded metal sheet.
- Removable decorative plates made of brass. Holes can be closed with dedicated caps supplied with the sunbed.
- Cathaphoresis pre-treatment and thermosetting polyester powder coating.
- Usable with or without wheels (Tiki 198R wheels).
- Backrest adjustable in 4 positions, in addition to the fully reclined one.
- Leveling on uneven surfaces ensured by 4 adjustable feet.
- Wheels can be mounted both externally and internally and are intended exclusively for movement, as the sunbed is self-supporting.
- Waterproof cushions combining two densities: a firmer layer for support and a rubber layer for enhanced comfort.
- The sunbed is not stackable.
